

Table with columns for variant name (e.g., NLP MIC (PCR) →), NLP MIC (SQ2) →, variant →, and a grid of columns for other variants (e.g., B.1.354, B.288S, B.1577, etc.). The table is color-coded by variant type and contains symbols like '+' and '-'.

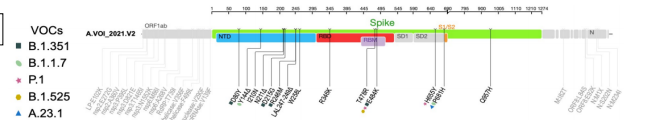

trans - ovlivnění transmissibility
esc - únik před státem protřídač
další mutace v individuálních lósech
NSP15C - ovlivňuje ORF3b
obličejní mutace
N termínální doména - vazba proteinů
oblast furinového štěpného místa - ovlivňuje vazbu na receptor
Ale jedná práce zvyklí patogenem
receptor binding doména
INS = inzercce

DEV De-escalated variants

(1) the variant is no longer circulating, (2) the variant has been circulating for a long time without any impact on the overall epidemiological situation, (3) scientific evidence demonstrates

Supplemental Fig S4: Genome map of the A.VOLV2, with mutations annotated by presence in other VOCs
